

CHAPTER 10 / Start a shared task

Start a shared task

Bring real work. Choose the part you can undertake. Make the result usable by the next person.

Begin with an unfinished thought, a product, a document or a capability. Clarify the desired change, then select packing, readiness or another applicable path. Reuse valid Context and delegation instead of retelling everything. Use this card to structure the first shared discussion.

Shared task card	What to establish
My Intent	What should become possible? What is happening now? What would make the result valuable to me?
Participation and responsibility	Who sets the goal, contributes, executes and accepts? Which decisions remain with each party?
Existing Reality	Product, version, batch, files, location, equipment and current conditions. State what is unknown.
Selected path	How were options compared? What was selected? Which conditions must be prepared, and by whom?
Delivery and economic scope	The digital or physical result, time window, charges and responsible parties.
Tests and Acceptance	How is the result checked? Who accepts it and within what scope? What is not covered?
Differences and continuation	How are partial completion, version changes or failure handled? Where does the next participant continue?

A complete task should leave an accepted result, necessary Evidence, attributed contributions and a next entry point. Participants may also revise, return or choose not to continue. Record that clearly rather than treating it as a failed conversion the system must eliminate.

Scan to open the HSMC entry point. This QR carries no credentials and does not create an order or authorize execution.

Start here

The first task follows the agreed scope and actual available entry. This card begins a collaboration; it is not an automatically binding quotation or order.

From what is possible in Reality to what becomes possible for me. REALITY CAN → I CAN ACT.
