Afghanistan
Business and delivery worksheet

> Working reference in English. Transaction-specific decisions and professional acceptance remain open.

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

The current ministry describes Pashto and Dari as official. The 2004 Constitution is historical and listed by the ministry among nullified constitutions; no current constitutional-law conclusion is made. Other local languages remain extensions.

Role	Shared written editions
Country baseline	Pashto; Dari
Official-purpose / link role	No additional language assigned by this scope
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which current authority and documentary requirements apply at the task location? Verify them locally; do not rely on the historical 2004 Constitution as current law.
- Which Pashto/Dari edition and regional terminology does each recipient require, and which bilingual reviewer will compare both against the engineering master?

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?

- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

Scope sources

- Ministry of Foreign Affairs, Afghanistan — Background, Population and Languages. Retrieved 2026-11-20. Used as a current ministry descriptive baseline, not as proof that the 2004 Constitution remains in force.
- Ministry of Justice, Afghanistan — Collection of Nullified Constitutions of Afghanistan, Constitution dated 28 January 2004 in the collection. Retrieved 2026-11-20. Conflicts with a legacy page title saying 'Enforced'; avoid current constitutional-law claims from that legacy text.
- Ministry of Justice, Afghanistan — Enforced Constitution of Afghanistan (legacy 2004 text), Article 16. Retrieved 2026-11-20. Historical reference only; the current nullified-constitutions collection prevents treating this as current law.
