Afghanistan
Business and delivery worksheet

> Working reference in English. Transaction-specific decisions and professional acceptance remain open.

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

The current ministry describes Pashto and Dari as official. The 2004 Constitution is historical and listed by the ministry among nullified constitutions; no current constitutional-law conclusion is made. Other local languages remain extensions.

Role	Shared written editions
Country baseline	Pashto; Dari
Official-purpose / link role	No additional language assigned by this scope
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which current authority and documentary requirements apply at the task location? Verify them locally; do not rely on the historical 2004 Constitution as current law.
- Which Pashto/Dari edition and regional terminology does each recipient require, and which bilingual reviewer will compare both against the engineering master?

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?

- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

Scope sources

- Ministry of Foreign Affairs, Afghanistan — Background, Population and Languages. Retrieved 2026-11-20. Used as a current ministry descriptive baseline, not as proof that the 2004 Constitution remains in force.
- Ministry of Justice, Afghanistan — Collection of Nullified Constitutions of Afghanistan, Constitution dated 28 January 2004 in the collection. Retrieved 2026-11-20. Conflicts with a legacy page title saying 'Enforced'; avoid current constitutional-law claims from that legacy text.
- Ministry of Justice, Afghanistan — Enforced Constitution of Afghanistan (legacy 2004 text), Article 16. Retrieved 2026-11-20. Historical reference only; the current nullified-constitutions collection prevents treating this as current law.

Bangladesh
Business and delivery worksheet

> Working reference in English. Transaction-specific decisions and professional acceptance remain open.

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

Bangla is the state language. The existing Bengali edition is a shared source; Bangladesh terminology review and recipient acceptance are pending.

Role	Shared written editions
Country baseline	Bengali / Bangla
Official-purpose / link role	No additional language assigned by this scope
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which Bangladeshi terminology, units, labels, service or contractual wording need adaptation from the existing Bengali source, and who signs off the country-specific changes?

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?
- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

Scope sources

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

Dzongkha is the national language. English is available as a project reference and is not presented here as a second constitutionally designated national language.

Role	Shared written editions
Country baseline	Dzongkha
Official-purpose / link role	No additional language assigned by this scope
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which Dzongkha document, label or recipient requirements apply to this task, and where may an English engineering reference accompany them? Verify that the text is Dzongkha, not generic Tibetan.

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?
- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

India
Business and delivery worksheet

> Working reference in English. Transaction-specific decisions and professional acceptance remain open.

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

Hindi in Devanagari and continued English cover the Union-level publication baseline. State/territory requirements and the 22 Eighth Schedule languages remain separately tracked; Hindi is not labelled a national language.

Role	Shared written editions
Country baseline	Hindi
Official-purpose / link role	English
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which Indian state or territory, recipient, authority and sector are involved? Determine language requirements in that setting instead of treating Union Hindi/English as sufficient for every task.
- If a scheduled-language edition is needed, record its exact language and script. Keep the fifteen pending translation targets and India-specific acceptance of Nepali/Urdu visible.

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?

- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

Scope sources

- Legislative Department, Ministry of Law and Justice, India — Constitution of India, as on 11 November 2025, Article 343; Eighth Schedule. Retrieved 2026-11-20. State/territory official-language rules and task-specific language requirements require a separate local profile.
- Department of Official Language, Government of India — Official Languages Act 1963, Section 3. Retrieved 2026-11-20. Official indexed statutory text was available; direct PDF access was not fully verified in this research run.

Iran
Business and delivery worksheet

> Working reference in English. Transaction-specific decisions and professional acceptance remain open.

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

Persian is the official language and script. The fa edition has an Iran written-use profile; Dari prs remains separate. Iran is included by UN M49 geography and is a SAARC observer, not a member.

Role	Shared written editions
Country baseline	Persian (Iran)
Official-purpose / link role	No additional language assigned by this scope
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which Iranian Persian terminology and official-document requirements apply to the task? Do not substitute Dari without separate review.
- Which actual parties, supply route, payment route and permissions apply to this proposed activity, and who verifies that the activity can proceed under the current applicable requirements?

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?

- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

Sri Lanka
Business and delivery worksheet

> Working reference in English. Transaction-specific decisions and professional acceptance remain open.

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

Sinhala and Tamil are official and national languages; English is the link language. Reused Tamil requires Sri Lankan terminology review and recipient acceptance.

Role	Shared written editions
Country baseline	Sinhala; Tamil
Official-purpose / link role	English
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which Sinhala, Tamil and English versions are needed for the recipients and applicable administrative process? Record each language's role and the controlling contractual text.
- Which Sri Lankan Tamil terminology must be reviewed or adapted from the reused ASEAN Tamil source before country acceptance?

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?

- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

Language baseline

Dhivehi is the national language and uses Thaana. English project references do not imply co-official status.

Role	Shared written editions
Country baseline	Dhivehi
Official-purpose / link role	No additional language assigned by this scope
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which Dhivehi instructions, labels or records does the recipient require? Review Thaana shaping, bidirectional identifiers, dates, units and QR/NFC destinations in the printed output.

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?
- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

Scope sources

Nepal
Business and delivery worksheet

> Working reference in English. Transaction-specific decisions and professional acceptance remain open.

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

Nepali in Devanagari is the federal official-language baseline. The Constitution recognizes all mother tongues as languages of the nation and permits additional provincial official languages; those are not all completed by this edition.

Role	Shared written editions
Country baseline	Nepali
Official-purpose / link role	No additional language assigned by this scope
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which province, local authority and recipients are involved? Check whether an additional provincial or local language is needed alongside Nepali and record that extension explicitly.

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?

- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.

Scope sources

- Office of the Attorney General, Nepal — Constitution of Nepal, revised English version as amended, Articles 6 and 7. Retrieved 2026-11-20. Direct open returned no usable PDF text. WIPO's constitutional text corroborates the language provisions.
- World Intellectual Property Organization, WIPO Lex — Constitution of Nepal 2015, Articles 6 and 7. Retrieved 2026-11-20. WIPO record is the 2015 version; the official government indexed amended text was used to cross-check these provisions.

Pakistan
Business and delivery worksheet

> Working reference in English. Transaction-specific decisions and professional acceptance remain open.

HSIMC South Asia C0-001 · English worksheet · 20 November 2026

Status: Unfilled worksheet; local professional decisions and task acceptance are pending.

Language baseline

Urdu is the national-language baseline. Article 251 permits English for official purposes until replacement arrangements; province-specific requirements remain separate. Verify operational requirements against the current applicable text.

Role	Shared written editions
Country baseline	Urdu
Official-purpose / link role	English
Shared engineering reference	English; this does not imply official status in every country

Record the actual task

Task ID: ___ · Contract ID: ___ · Object/input version: ___ · Delivery version: ___ · Intended use and destination: ___

For each question, record the answer, accountable owner, current source or evidence, reviewer, decision and date. The JSON companion provides individual fields.

Country and language decisions

- Which federal, provincial, sector and recipient language requirements govern this task? Check the current applicable text and whether Urdu, English or an additional provincial language is needed.
- Can recipients read the selected Naskh Urdu print layout comfortably, or should an optional Nastaliq layout be commissioned without changing the underlying language identity?

Parties and authority

- Who are the legal contracting parties, service locations and authorized signatories? Record their verified identities and the source of authority.
- Which party may instruct each human, device or service? Define delegation limits, changes, suspension and escalation contacts.

Task and deliverable

- What human intent, physical or digital object, input version and operating conditions does this task cover?
- What must each node deliver, in which version and format, by what handover, and against which measurable acceptance criteria?
- Which contract language and controlling text will the parties use? Who verifies translated engineering meaning, identifiers and units?

Tax, invoicing and payment questions

- For the actual goods, services, licensing, human work and locations involved, which registrations and tax treatments need checking against current official sources?

- Who issues the invoice and pays whom? Which invoice fields, currency, withholding, indirect-tax, payment and record requirements apply to the specific transaction? Record the reviewer, source date and conclusion; do not assume a regional exemption.

Customs and movement of physical goods

- Will equipment, samples, finished goods or temporary imports cross a border? Identify exporter, importer, route, declared description, classification and origin evidence.
- Which current customs procedures, valuation, permits, documentary evidence and any claimed preference conditions apply to this actual movement? Mark this section not applicable only with a reason.

Product, service and site requirements

- Which product, service, installation, operator, calibration, safety, label and instruction requirements apply to the intended use and destination? Who confirms the applicable current requirements?
- Who controls local execution, equipment readiness, maintenance and incident handling? Identify the evidence required before physical action and after completion.

Data and permissions

- Which data, images, recordings, personal information, designs and confidential materials are needed? Who has permission to collect, share, process and retain them?
- Which recipients, storage locations, cross-border transfers, access controls and retention/deletion decisions apply? Link the applicable sources and task-specific approvals.

Evidence and acceptance

- Link the input and output hashes, methods, responsible nodes, timestamps, observations, deviations, checks and professional-review records to the same task and object versions.
- Who accepts which exact delivery version, against which criteria and evidence? Record accept, accept with conditions, request changes or reject, together with reasons and authority.
- What changes trigger a new review: source content, translation, destination, intended use, law, supplier, process, device, data route or accepted version? Record the next check or event trigger.

Acceptance record

Decision: pending · Exact accepted version: ___ · Acceptance authority: ___ · Criteria: ___ · Evidence: ___ · Conditions/reasons: ___ · Date: ___ · Next review trigger: ___

This worksheet contains questions for an actual task. No business, tax, customs, product or data approval is recorded. The regional grouping does not create a shared legal or tax regime.
